

Leopard Control

Building Management System Integrators

Leopard Controls prides itself on being one of the foremost providers of open system solutions based on the Web-based platform powered by the NiagaraAX Framework®. Its open structure create a common development and management environment for the integration of BACnet, LONWORKS, Modbus™, and other standards.

Quality Installations...

For Leopard controls to class a controls installation as a success the project must be delivered on time on budget and meet the customers requirements.

Effective mechanical services control systems, building management systems (BMS) and mechanical services switch board (MSSB) installations must also provide effective environmental control coupled with intelligent energy efficiency.

Being one of the largest independent Building Management companies in Western Australia Leopard Controls has been providing intelligent controls solutions since 1980. Leopard Controls provides a nationwide and international capability in design, installation and commissioning of building management systems.

Our control systems meet the most demanding specifications and ensure the smooth transition of complex projects from inception through to final completion.

Overview of Services

- Specification Development
- Advice on integration issues
- Preparation of control schematics
- Preparation of budgetary costs
- Energy Audits
- Condition Surveys
- Design Engineering
- Project Management
- Supply of intelligent building controls

Leopard Control

Building Management System Integrators

Controls System Integrators...

Leopard Controls sees 'integration' as the bridge between technologies and software.

Leopard Controls solutions enable organisations to achieve significant system performance improvements and efficiencies. Combining the best of business, industry and technical expertise, Leopard Controls can help in the implementation of a customised integrated building environment by meeting the specific needs of customers now and into the future.

Leopard Controls open system solutions are based on the Web-based platform powered by the NiagaraAX Framework®. Its open structure creates a common development and management environment for the integration of BACnet, LONWORKS, Modbus™, and other standards.

Service...

Maintenance Services

Planned Preventative Maintenance will reduce overall service costs through regular, pre-planned attention. This will check the current status of a system and minimise both the likelihood of it failing and the impact of any breakdown.

We work in partnership with our customers developing 'best fit' service agreements that find the balance between quality, value and service levels.

Dedicated managed and maintenance solutions are car-

Energy...

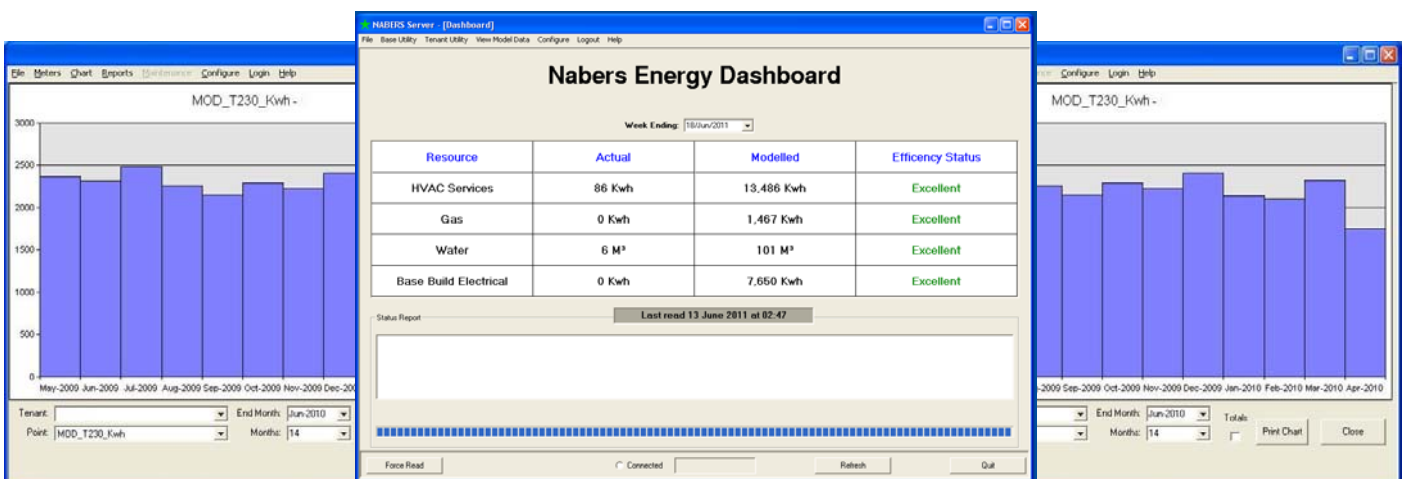

Energy Reporting & Billing Software

Our Energy Department has a dedicated team of BMS, HVAC and energy specialists offering complete energy solutions. Working closely with our clients, we identify energy saving potentials.

Intelligent buildings work with their environment to maximise the use of the resources around them – such as the ambient temperature and available sunlight – while ensuring that services work together on a demand-driven basis to significantly reduce energy consumption.

Whether you manage a nationwide chain or a single multi-use site, Leopard Controls Billing Software can quickly, easily and cost-effectively allocate individual occupant electrical usage and bill tenants for their energy usage.
